FILE 7: interview_guide.pdf

Description: Semi-structured interview guide used with the 20 senior stakeholders in the prototype sub-study: 4 banks, 3 developers, 3 agents, 2 regulators, 4 mortgagors and 4 tenants. The 2-hour workshop included a 30-minute blockchain literacy session, a 45-minute Hyperledger Fabric testnet demonstration simulating title transfer and escrow smart contracts, and a 45-minute structured interview using a modified questionnaire. Interviews were audio-recorded with consent and transcribed verbatim.

Voluntary Participation Statement: Same as in File 5.

Theme 1: Dual Land Tenure and Institutional Context (RQ1)

1. How does Ghana's dual statutory/customary land system affect real estate fraud risks?
2. Which fraud types are most common in statutory versus customary transactions?
3. How is customary consent currently verified?
4. What role do chiefs, family heads and customary authorities play in land transactions?
5. What institutional weaknesses enable double selling, forgery or corruption?

Theme 2: Blockchain Capabilities and Fraud Reduction (RQ1 / H1)

6. How might blockchain immutability reduce land-record tampering?
7. How might transparency reduce information asymmetry?
8. How might smart contracts reduce corruption in property transactions?
9. Under what conditions would these benefits not materialise?
10. How does trust in existing institutions affect whether blockchain is seen as useful?

Theme 3: Institutional Trust, Regulatory Clarity and Digital Literacy (H1–H3)

11. Is trust in the Lands Commission, courts, banks and customary authorities linear or threshold-like?
12. At what level of institutional trust would blockchain adoption become feasible?
13. What legal recognition is needed for smart contracts and digital signatures?
14. How does BT literacy affect willingness to adopt?
15. What literacy programmes would be needed before implementation?

Theme 4: Oracle Governance and Customary Consent (H4 / RQ2)

16. What off-chain data must be verified for customary land transactions?
17. Can a chief's signature and family consent be digitally attested? Why or why not?
18. What oracle-governance conditions would make verification trustworthy?

19. How should human review be positioned relative to automated smart-contract execution?
20. What happens when oracle validation and customary authority conflict?

Theme 5: G-REMB Design Requirements and Phased Implementation (RQ2)

21. Should statutory and customary lands use separate permissioned chains?
22. What should a trustless bridge between chains verify?
23. What dispute-resolution mechanisms are needed?
24. Should smart contracts be legally final immediately or subject to a challenge period?
25. What should be the sequence of implementation across statutory and customary lands?
26. What should policymakers prioritise: ledger technology, governance, or both?
27. Is there anything else you would like to add?

Interviewer Closing Protocol: Reassurances about confidentiality; thanks for participation
